## About Venture Leaders

The Venture Leaders program is a unique and exclusive opportunity to meet top international investors and industry leaders, allowing startups to build an exceptional business network. The entrepreneurs will share challenges, develop ideas, and return to Switzerland with a new outlook and drive to succeed.

**ALGORIZED** leverages proprietary ML algorithms to enable real-time people-sensing, positioning and vital sign detection using UWB radar and wireless sensors. Our software-only platform powers innovative applications across industries, from robotics to automotive.

**Alivion**, a Swiss ETH spin-off, detects volatile biomarkers in breath through handheld devices for healthier, longer lives. Focused on revolutionizing personalized health, Alivion makes health monitoring more convenient, accessible, and integral to daily decisions.

AtlasVR

**AtlasVR** provides efficient and effective training in vocational training and onboarding processes through Virtual Reality, ensuring safe, engaging sessions that boost productivity and reduce costs.

CYSEC

**CYSEC** is a leading European cybersecurity company specializing in cloud and space industries. Renowned for its innovation, CYSEC delivers end-to-end and off-the-shelf solutions tailored to advanced cloud technologies and cutting-edge newspace missions.

databaum

**Databaum** is a leading provider of advanced disease management tools for sustainable agriculture, using AI and field sensors to optimize crop health and yield. Our technology helps farmers make data-driven decisions, reducing pesticide use and boosting productivity.

**Galeri** pioneers immersive media and biofeedback solutions, providing VR/AR training and wellness rooms for aviation and travel. Their technology enhances staff performance, resilience, and passenger experiences with adaptive, engaging solutions.

**Hydromea** ensures efficient integrity assurance for submerged assets with a scalable subaquatic data acquisition and analytics platform, reducing costs, pollution, and safety risks.

**NovoViz** is a fabless semiconductor company specializing in optical image sensors for photon-starved and solar-blinded environments. With high sensitivity, speed, and dynamic range, we enable single-photon detection and capabilities beyond sensing.

**Optiverse** automates meeting documentation, action items, and knowledge base creation, transforming insights into actionable tasks with state-of-the-art technology to boost productivity.

PROVUU

**PROVUU** develops outdoor wearable technology with AR snow goggles that offer enhanced visibility in all conditions, from shadow or cloudy to snowy weather.
