# A hardware-software integrated smart factory system

- A one-stop management tool designed specifically for medium and large-scale recycling factories, optimizing operational efficiency and making good practice scaleable

- AI inspection cameras that automatically identify scrap materials type, recovery and value on the weight scale, reducing human errors

- Introduce the best operational and management practices of the world's top recycling/trading/processing/production factories

- Provide core functions such as AI quality inspection, product analysis, classification guidance, anomaly detection, automated documentation, inventory management, and smart factory features

SaaS System for the Recycling Industry

- Provide portable ERP systems for small and medium-sized recycling factories

- Supports customer management, inventory management, inbound and outbound goods management, as well as AI analysis functions
