Evimatic is an AI-based platform designed to accelerate clinical protocol development, streamline research, and generate high-precision, customizable evidence synthesis. Evimatic offers participatory analysis of all scientific evidence, multiple and customizable heuristics, raw model outputs, API access, and data transparency. It serves as a strategic resource for professionals across the health industry, transforming complex data into actionable insights for clinical, academic, and industrial applications.

This technology is validated into the field of ADHD treatment before scaling other diseases. Evimatic is currently being deployed across the Institut d'Assistència Sanitària (IAS), the primary mental health service provider for the province of Girona.

We are seeking founding users in the health sector who want to redefine the way they use scientific knowledge regarding ADHD by incorporating customizable evidence-analysis workflows into their professional practice.

If you want more information about it, you can find us at Hall 8.1, University Spin-Off Zone, with the University of Girona (8.1C32). We are open to meetings!

Myosafe Innovations develops scalable digital platforms to optimize time-critical medical care, one of the most complex and inefficient areas of healthcare delivery.

Acute pathways such as myocardial infarction, stroke or major trauma require rapid, coordinated decisions across prehospital services and hospitals. However, these processes often rely on fragmented communication and manual workflows, limiting efficiency and system learning.

Myosafe addresses this challenge by building disease-specific digital operating systems. Its flagship programs, ODISEA, enables real-time clinical coordination, secure information sharing and automated process recording across all stakeholders involved in acute care.

Validated in routine clinical practice, we designed ODISEA as a modular and scalable solution, supporting data-driven emergency care at scale.

If you want more information about it, you can find us at Hall 8.1, University Spin-Off Zone, with the University of Girona (8.1C32). We are open to meetings!
