CUBICS is a B2B technology company, founded in 2024, that develops digital solutions for the industrial sector. Our main product is a cross-industry digital platform that connects companies seeking bespoke products with qualified manufacturers, providing local industrial businesses with real manufacturing opportunities.

The platform centralizes the entire commercial process – from request to final order – ensuring traceability. A core value for manufacturers is our Requests Board; whenever you submit a quote, you will receive an automated feedback report once the request is closed. This report shows exactly how you ranked in terms of price, lead time, and response speed, giving you valuable market insights whether you win the project or not.

Beyond generating new sales, CUBICS allows you to centralize your quote management much more efficiently and improves your digital positioning in front of new potential clients. Furthermore, the platform offers full flexibility, you can also act as an industrial consumer to easily subcontract other manufacturing techniques you may need, such as specific treatments or finishes.

By bringing buyers and suppliers into one digital ecosystem, it supports more efficient industrial collaboration.

If you want more information about it, you can find us at Hall 8.1, University Spin-Off Zone, with the University of Girona (8.1C32). We are open to meetings!
