MOBILITY-AS-A-SERVICE

SUPPORTING DEPLOYMENTS OF MOBILE DEVICES AT ANY SCALE

As a pioneer of the as-a-service model we developed our industry leading Mobility-as-a-Service (MaaS) offering. MaaS is a comprehensive, high performance mobile ecosystem that combines phones, tablets or any connected device, applications, Mobility Help Desk voice and data plans, and help desk services at a fixed fee per device.

MaaS provides your organization everything required to deploy robust enterprise mobility initiatives.

DESIGN

Utilizing our extensive mobility experience our first goal is to help you design or re-design a mobile ecosystem architecture uniquely tailored to meet your organizational objectives. From white board through final implementation our consultants will help you achieve best-in-class out-comes without the usual uncertainties and risks.

PROCURE

Once your customized Mobile Ecosystem architecture is designed, our team goes to work to procure all that's needed including wireless carrier services, devices, applications and accessories. Our exclusive single source solution set unburdens your employees, stabilizes your costs and standardizes your mobile environment.

SECURE

During the next phase, our technicians create a blueprint and image the applications, security and compliance permissions on every device to your exact specifications. This best-in-class capability ensures both policy and performance continuity before the devices are shipped to your employees. This ensures a smooth deployment within your organization.

EXTEND

As your organization continues to grow in size and complexity Mobility Help Desk is fully equipped to scale with your expanding business requirements. Our service goes beyond phones and tablets into other connected devices such as smart watches, laptops and machine-to-machine connections. In addition, our Mobile Ecosystem Solutions offer global reach without any degradation of capability or service. As your needs expand and evolve our experienced team will be with you every step of the way from a global perspective.

MANAGE

Once your Mobile Ecosystem is established our Always On monitoring and management processes proactively monitor and report on your wireless environment so your organization can focus on its core business objectives. End-users are fully supported with 24/7 access to our U.S. based Mobility Help Desk personnel.
