The Pierson Wireless Advantage

Pierson Wireless is committed to excellence, innovation, and a service philosophy that delivers a customer-first approach centered on communication and collaboration. This approach has been a hallmark of Pierson Wireless since our founding in 2002. We call it The Pierson Wireless Advantage. You'll call it the best customer experience in telecommunications, and it includes:

 **Industry-leading Expertise**

 **Unparalleled Professionalism**

 **Tailored, Turnkey Solutions**

 **Quality Execution**

 **Clarity Through Customer Education**

 **Clear and Consistent Communication**

 **Cost-effective Outcomes**

 **Actions that Reflect Our Core Values of Honesty, Integrity, Loyalty, and Trust**

Our Solutions

Private Networks

Private networks offer enterprises a purpose-built, high-performance wireless network with dedicated bandwidth and wireless infrastructure for their unique operational and connectivity needs. With a private network, you are in control of the mobile environment, and not a carrier in a traditional network. You make operational and management decisions for user devices and network parameters.

Cellular Enhancement

Pierson Wireless' distributed antenna systems (DAS), small cells and picocells are designed to provide optimal cellular coverage and performance for buildings of all sizes and occupancy.

Our Solutions

Public Safety Communication Systems

A public safety communication system, also known as an Emergency Responder Radio Communication System (ERRCS), is an antenna-based system that ensures first responders and safety officials will maintain mission-critical wireless communications during emergency situations within building structures of all sizes.

Monitoring & Maintenance

Your organization depends on reliable, highly-performing wireless connectivity to support a myriad of key business functions. But when connectivity is interrupted, so is productivity. Pierson Wireless offers a variety of Monitoring & Maintenance programs that provide peace of mind and confidence your enterprise's wireless systems are operating at optimal levels.
