# Software Engineering

Our competencies in the service of your accurate software solution

Developing software on
TIME
⟶
Achieving high
QUALITY
⟶
Working with the right
BUDGET

Objective:

We engage our software engineering know-how to make your business processes run smoothly and efficiently. Be it complex or standard, we have your software solution covered through every stage from requirements to development, implementation, and maintenance.

What's in it for you:

• Support for business evolution
• Shared risk, optimized costs
• Reduced complexity of IT service management

What defines us:

• Skilled people, know how, fair prices and controlled risk
• Talented team to transpose the client's vison into efficient business based on high quality
• Mature organization structure with the speed and flexibility necessary to adapt to project and customer requirements

Experience

1994
the year we entered the market

90% turnover from exports	**15** years of same core team
75% technically certified staff	**20+** years experience in Software Development
65% developers in Dedicated Team model	**10+** industries mastered

SERVICE PORTFOLIO

PRODUCT & CUSTOM SOFTWARE DEVELOPMENT

High quality - Trusted services - Top performances

Software applications to make your business processes more accurate and efficient through full range of services.

• **Software Consulting**
• **Software Services**
• **Software Development**

DEDICATED DEVELOPMENT TEAM

Extended development resources

Very popular solution for cost-effective resources assigned exclusively for customers and retaining their unique domain knowledge.

MOBILE APPLICATION DEVELOPMENT

Space is no longer a limit!

Full-cycle development of innovative and scalable mobile solutions from architecture, to back-end development, front-end development and quality control.

IT MANAGED SERVICES

Flexible subcontracting - Agreed SLAs - Increased efficiency

IT infrastructure is the foundation of your entire business processes. Our managed infrastructure services will help you manage your IT environment and operate it professionally.

• **Service Management**
• **Production Support**
• **Maintenance & Enhancement**
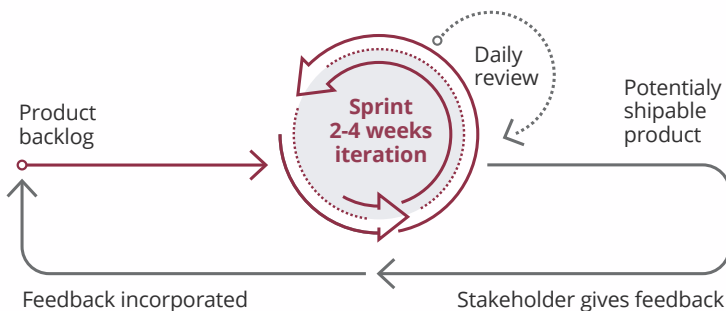

TESTING & QA

More than just debugging

Testing efforts prevent faults from occurring, thereby producing higher quality software, reducing costs, increasing speed to market, and improving end-user satisfaction.

WE KEEP IT SIMPLE.
WE ARE AGILE

With well mastered Agile methodologies, our engineers cope with any unexpected thing that pops up along the solution way.
You can change your mind at whatever stage during the project and a new approach is defined.
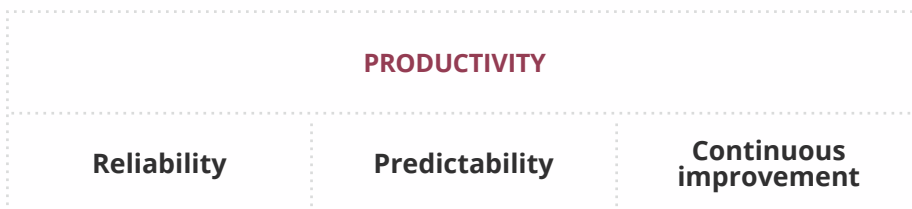

We have been here and successful before the Agile era, so trust us for classic approaches also.

Product backlog

Daily review

Sprint 2-4 weeks iteration

Potentialy shipable product

Feedback incorporated

Stakeholder gives feedback

QUALITY PILLARS

Q&A is in each and every process and activity: analysis, design, development, maintenance, testing and so on. They are all conducted according to project management methodologies and PDCA principle.

Q&A is the natural result of three main productivity pillars.

PRODUCTIVITY

| Reliability | Predictability | Continuous improvement |

COLLABORATION MODELS

Time & Material

Turnkey Projects

Dedicated team & facilities

Mixed models

SUCCESS KICKOFF

1 **Confidentiality agreement**

2 **Request for information**

3 **Request for project**

4 **Collaboration agreement**

Top 5 reasons for engineering with us

Cost reduction

Customized solutions

Quality = skilled engineers + accurate working procedures

Cultural & geographic proximity

Budget, reports, and schedules control over all project phases

Expertise

Web Development

Internet -of-Things

Cloud Solutions

ERP

DevOps

Enterprise Mobility

Industries

Manufacturing and Logistics

Financial Services and Banking

Healthcare and Fitness

Automotive

Travel & Tourism

e-Commerce

Retail and POS

Tele-communication

Real Estate

Health & Pharma
