

Digitize Operations & Improve the Connected Experience with **Boingo Private Networks**

A **private wireless network** provides dedicated, secure bandwidth to power your enterprise's connected needs—from Industrial IoT (IIoT) to critical communications. These closed networks give your business direct control over wireless coverage, location and quality, resulting in a reliable network designed to maximize operational efficiencies and realize new levels of productivity.

BENEFITS

- **Coverage:** Delineate wireless coverage area based on venue goals.
- **Control:** Define which users, devices and use cases connect to the network.
- **Capacity:** Move operations traffic off public Wi-Fi to free up capacity and improve the overall connected experience.
- **Security:** Enhance security with a closed network and on-premise data processing via Boingo's Multi-access Edge Compute (MEC) solution.
- **Efficiency:** Realize cost savings and increase productivity with connected operations.
- **Data & Analytics:** Gain rich insights by digitizing operations.

USE CASES

- Asset tracking
- Video analytics
- Security management
- Connected utilities
- Smart machines & IIoT
- Touchless customer experiences

SECURITY AND SPEED WITH MEC

Boingo's **Multi-access Edge Computing (MEC)** solution brings network processing to your venue and features ultra-low latency, super-charged processing power, data security and rich analytics.

THE BOINGO DIFFERENCE

Boingo is the largest operator of indoor wireless networks in the United States. Take advantage of our 20+ years of experience, end-to-end services, converged network solutions, 24x7 network management and on-demand insights to power your digital transformation.
