

Data Sheet

Mobile Call/SMS Manager

A dynamic, end-to-end solution designed to simplify and optimize global calling and SMS operations. Whether your goal is to make calls internationally, manage telemarketing outreach, or reduce costs for international businesses, our Mobile Call/SMS Manager allows organizations to leverage both eSIMs and physical SIM cards for seamless communication. This powerful platform enables dynamic SIM card swapping to ensure anonymity and continuity without risking blocks or blacklist issues.

Key Benefits

Reduce international calling rates utilizing local SIM cards managed remotely, bypassing expensive international fees by connecting through region-specific carriers.

Two-Factor Authentication (2FA) made easy using dynamic SIM card swapping so you can receive and verify codes across multiple numbers and regions seamlessly.

Easy to use no advanced training needed.

Dynamic SIM card swapping to switch between different SIM cards and call from multiple numbers, ensuring anonymity and preventing call blocking or blacklisting.

Full control over calls and SMS—manage call sequences, SMS campaigns, and SIM/modem operations in real time, from anywhere in the world.

Full end-to-end support from our engineering and technical team.

Industries

Telemarketing Agencies

Efficiently handle large volumes of calls using dynamic SIM card swapping, preventing phone number blocks, and ensuring that your calls reach the intended recipients.

Collections Agencies

Make secure, anonymous calls from multiple phone numbers.

International Organizations

Whether managing calls for logistics, international trading, consulting, or global tech services, easily switch between local carriers to keep call quality high and costs low.
