

# Loading Bay 5–7 – Build Conditions for Space Only Exhibitors

## General Principles

Exhibitors must plan for a simple build approach that minimises on-site construction time and disruption.

## Build Method

- Exhibitors should plan to pre-fabricate structural elements off-site and bring them in for placement and finishing only.
- Modular or semi-modular structures are strongly encouraged to reduce complexity and ensure rapid installation.
- Complex build activity within Loading Bay 5–7 is not permitted.

## Build-Up Schedule

- Build activity must take place within the build schedule outlined in the Online Event Manual (OEM).
- There is strictly no activity after 21:00 on any day. Late work will not be permitted under any circumstances.

## Dismantling

- On Thursday, dismantling is permitted between 18:00 and 21:00 only and should focus on lighter elements such as furniture, AV, and décor.
- Remaining dismantling must follow standard OEM dismantle hours.
- No activity is allowed after 21:00 during dismantling.

**Please note: All other rules and regulations in the [Online Event Manual](#) apply in full.**
