

SPEEDTEST powered™

Device and Hardware Partnerships

Speedtest Powered™ provides actionable insight into the quality of fixed, mobile or Wi-Fi networks, device performance and overall customer experiences. Partner with Ookla® to integrate Speedtest Powered into your routers, gateways and other connected devices to strengthen your brand today and make better data-driven decisions tomorrow.

Most common equipment

- Routers
- Gateways
- Modems
- Test & measurement devices
- IoT devices

Client/partner use cases

- Broadband ISPs
- Network equipment providers
- Service assurance teams
- Test & measurement
- Quality control

Speedtest Powered benefits

With Speedtest Powered, your company retains its brand identity while giving your end-users an official, consumer-friendly Speedtest® integration within an embedded environment. Speedtest Powered integrations use a custom version of Ookla's technology that ensures a trusted test experience. This allows independent end-to-end network performance testing and simultaneously provides you with device insights and a comparative view against local to enterprise level network metrics.

Speedtest Powered is an efficient way to identify potential network issues, reduce expensive truck rolls and proactively drive customer success.
