

Ubiquitous Global Coverage

floLIVE has you covered with Non-Terrestrial Networks (NTN)

floLIVE has created the world's first and largest hyperlocal global data network. With a comprehensive global carrier library based on an array of interconnected local core mobile networks, we provide centrally managed local cellular connectivity for any device, anywhere including affordable NTN coverage.

Ensure Always-On Connectivity with Satellite Coverage

No matter where your devices travel, on land, air or sea, floLIVE has you covered:

HOW IT WORKS

Direct-to-Device offering allows cellular modems and devices to connect without any change to device hardware or power profiles by utilizes 3GPP R17 with software upgrade only.

PLATFORM ACCESS

Once deployed customers gain full access to floLIVE's IoT platform, allowing them to control and manage their SIMs with ease.

SUPPORT

Our dedicated live support team is available 365/24/7 follow-the-sun to ensure successful SIM activation and provide a comprehensive demo of the floLIVE IoT platform.

USE CASES

Combining global cellular coverage and satellite roaming across critical use cases such as agriculture, maritime, logistics, mining and mass market-consumer devices keep your business always connected.

UBIQUITOUS COVERAGE SIMPLIFIED

By partnering with floLIVE you can ensure the most comprehensive coverage utilizing both terrestrial and non-terrestrial coverage around the globe with the simplicity of a single invoice and management platform. What could be more efficient for your business?
