

Total Control and Management of Data Traffic and Security for Corporate SIM Cards

Manage all SIM cards easily through our web platform Netmon

Description

Netmon is a platform to monitor and manage in real time the consumption of **national and roaming data traffic of SIM card** assigning customizable profiles with the ability to block, slow down, filter traffic and set the sending of notifications to exceed the set thresholds. Netmon is suitable for companies of all sizes and industries.

Benefits

Solution Agentless

Netmon doesn't require any software installation over the devices that use the SIM cards since works on a network level through an APN configuration

Control and awareness of consumption

Netmon helps you optimize your spending and have immediate control over consumption with real-time monitoring

Safe navigation

Thanks to navigation filters and integrated safety module

Smart inventory management

With Netmon you can manage the entire mobile fleet with the ability to apply business policies

Funcionalities

- Assign traffic limits to corporate SIMs
- Monitoring of consumption live, historical and analytical
- Set alerts to notify exceeding consumption thresholds
- Filter certain categories of traffic and/or URL filters
- Security: tracking, alerts, and threat management
- Block/reduce navigation speed after reaching assigned traffic threshold

Numbers

+ 2000 companies use Netmon

+ 300.000 Sim connected
