

## Solution for Tracking, Remote Control and Monitoring of all Corporate Devices

Optimize the performance of your devices and safeguard the security of corporate data and your collaborators.

### Description

An intuitive and flexible platform to manage and protect all business devices (smartphones, tablets, and others).

It's an MDM SaaS/EMM tool certified by Google as Android Enterprise Recommended that provides productivity, data security and business insights generated through Mobile Device Management.

### Benefits

#### Protect your privacy and data

Management and control of all company devices, with online and real-time inventory. Enable security actions on devices and ensure more security for your operation

#### Reduce company's costs

Reduced technical support costs for manual device management

#### Increase team's productivity

Without distractions during work, allowing access only to the authorized apps

#### Automation of the processes

Thanks to automatic inventory control through precise technologies and remote app setups and updates

### Funcionalities

-  Device inventory and separation of profiles
-  Remote blocking and alerts
-  Security alerts and policies
-  Remote app installation
-  Driver mode
-  Device tracking, check-in control
-  Geofence and timefence
