## **New Product : eSIMs**

This document is strictly private, confidential and personal to its recipients and should not be copied, distributed or reproduced in whole or in part, nor passed to any third party without the express permission of DT One.

# What is **eSIM**?

Embedded SIM (eSIM) replaces the physical SIM card in mobile devices. There are two types of eSIM:

1. **Data-only eSIM:** Designed to provide internet connectivity without a phone number.

*Now Available*

2. **“Full” eSIM with Mobile Number Provisioning:** Capable of storing and activating mobile phone numbers, allowing users to make calls, send text messages and access mobile data.

*Coming soon*

# Unlock a Market Experiencing **Phenomenal Growth**

**USD 17.5B**

**Projected Global eSIM  
Market Size by 2030**

**Reach a Global Audience**

Global Shift Towards eSIM  
Adoption

**90%**

**10.2%**

**CAGR (compound annual growth rate)**  
*during the forecast period of 2022 to 2030*

**Capitalise on Long-Term  
Opportunities**

Experience Impressive Growth & Drive  
Sustainable Expansion

# eSIM: Cutting-Edge Technology in Mobile Connectivity

## Cost-Effective Global Connectivity

Stay connected seamlessly in multiple countries without the hassle of purchasing local SIM cards or dealing with expensive roaming charges.

## Remote Provisioning

Eliminate the need for physical SIM card insertion or swapping. Enjoy a smoother onboarding process, and get greater control over your connectivity.

## Fast and Reliable Connection

Utilizes the best available technology (including 5G where available).

## Enhanced Network Switching

Get improved network coverage with the best service providers wherever you go. Better than purchasing from a single telco.

## Wide Device Compatibility

From smartphones and tablets to wearables and IoT devices, eSIMs are designed to support a wide range of devices, ensuring a seamless experience across all your gadgets.

# Connect with a Global Audience by Offering eSIMs
