SoftAtHome Supports Orange Polska in Launching Poland's First Wi-Fi 7 Broadband Solution

Orange Polska Cements its Position as Poland's Connectivity Leader in Fibre and Wi-Fi

Paris, France – 17 February 2025 – SoftAtHome, a leading software provider for broadband and Wi-Fi innovation, proudly announces collaborating with Orange Polska to launch Poland's first customer-facing Wi-Fi 7-enabled broadband solution. This achievement represents a significant leap in connectivity, empowering Orange Polska to deliver faster, more reliable internet to its customers.

The launch, on January 20th, of the new improved Funbox 10, powered by SoftAtHome's advanced solutions, brings Orange Polska's customers the latest Wi-Fi 7 capabilities. This includes leveraging the 320 MHz channel in the 6 GHz band to double throughput compared to Wi-Fi 6, supporting GPON and XGS-PON, with up to 8 Gbps fibre connections via the latter. This innovation enables Orange Polska to provide exceptional performance for demanding applications like online gaming, 4K streaming, and augmented reality while supporting the growing number of connected devices in modern homes. The availability of eco modes and recycled materials is a step towards more sustainable broadband.

The offer is already available in 39 cities, reaching over 2,5 million homes and businesses.

The tight project timeline—completed in under seven months—demonstrates the agility and innovation of Orange Polska and SoftAtHome's engineering teams.

Liudmila Climoc, CEO of Orange Polska, commented*: "I'm proud to announce that Orange Polska is the first operator in Poland to offer customers a new level of connectivity experience at home, boosted by Wi-Fi 7 wireless technology. This strengthens our position as a leader in connectivity and innovation, providing fast, stable internet that meets the growing demands of our customers."*

Arnaud Bellivier de Prin, CEO of SoftAtHome, added: *"We are thrilled to support Orange Polska with the deployment of Poland's first Wi-Fi 7 broadband solution. This project highlights the strength of our partnership and underscores SoftAtHome's commitment to innovation. The new Funbox 10 demonstrates how advanced Wi-Fi and fibre technologies can work together to deliver exceptional customer experiences."*

By integrating SoftAtHome's WiFi'ON and Connect'ON technologies, the new Funbox 10 ensures seamless connectivity, intelligent channel selection, and advanced smart Wi-Fi features to enhance network performance. This launch positions Orange Polska as a leader in next-generation connectivity while reaffirming SoftAtHome's role as a trusted partner for operators worldwide.

About SoftAtHome

SoftAtHome is an independent software provider with seven critical solutions: broadband (Connect'ON), Wi-Fi (Wifi'ON), security (Secure'ON), smart home (Things'ON), video (Watch'ON), analytics and QoE monitoring (Eyes'ON), and a new gateway Appstore environment (Orchestr'ON). With its products deployed in over 30 million home networks and millions of mobile devices, SoftAtHome helps telecom and network operators deliver enhanced digital home experiences. The company's 300+ employees, mainly software engineers, are committed to innovation and actively contribute to open-source communities like prpl. SoftAtHome's hybrid solutions leverage cloud-based components and software embedded in multiple mobile and fixed devices.
