Unified, easy-to-use engagement platform combining multiple engagement channels: SMS, WhatsApp, Viber, RCS

Future-proof technologies & elevated security: Rich messages, automated agents & bots, secure user verification, fraud prevention

Custom integrations

Project-based, partnership approach

WHY BIND? COMMUNICATIONS TO UNLOCK NEW BUSINESS POTENTIAL

Expert consultancy

We're a communications partner that aims to fill gaps others miss, turning lost time and hidden operational inefficiencies into new business opportunities.

Gap analysis

Deep business analysis enables us to create communications that minimize operational costs and allows users greater access to your services.

Messaging with purpose

We're not about sending more messages but about smarter implementations that allow new types of user monetization.

Proactive support

Our platform solves problems before they become support tickets. We end up handling just 3 support tickets on every 20,000,000 messages sent through our platform. We don't offer premium support because all our client messaging is handled with care.

WORKING WITH BIND WILL:

- Reduce your operational costs
- Increase the quality of your routing
- Improve your MNP, HLR and Number Scoring coverage
- Introduce various advanced SMS and Number intelligence platforms ready for next-gen API's

“Our return on investment has been remarkable, and we highly recommend this solution to other operators and businesses looking to enhance their number intelligence capabilities.

Stour Marine, United Kingdom

“We've found Bind Technologies to be a reliable and trustworthy partner in A2P messaging. Their deep industry knowledge and prompt support have been invaluable to our operations.”

Serge Khalil, CEO

“Bind may be new, but it operates with the confidence and expertise of a seasoned player. Driven by a highly experienced team with a sharp problem-solving focus and a pulse on the latest tech trends, Bind delivers with precision and forward momentum.”

Nick Pardas, Ops & Routing Director

TELCO-GRADE PRODUCTS:

Core Messaging Platform (CMP)

Versatile mobile messaging platform based on the self-healing and automated routing actions capable of delivering messages via multi-channel solutions relying on the integrated retry management system.

Number Intelligence System (NIS)

Elevate your mobile data management with our solution, offering network discovery, portability insights, and real-time status. Leverage powerful ENUM and HTTP APIs for data correction and normalization.

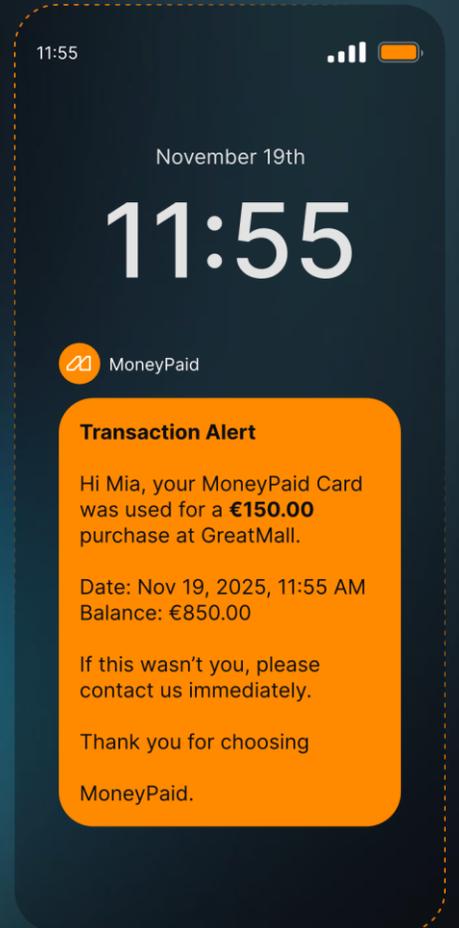

ENTERPRISE SERVICES AND ONBOARDING:

Enterprise engagement

We provide enterprise-grade messaging and consultation for RCS, SMS, Viber, WhatsApp, Voice and bussiness automation to businesses on global markets.

Increase traffic to your network

Plan to onboard 50 new enterprise-level customers in 2026: Retail (FMCG+), Delivery & Logistics, Rental Services & e-Booking from domestic and international markets (Germany, UK and Italy).

SIX MONTH ROADMAP (INTO 2026):

Customer Portal

White labeled customer portal add-on to SMS and NIS platforms.

Camara API compatibility

Extend NIS connectivity to cover Camara network APIs.

MNP Database tool

Allow automatic imports of MNP databases from various sources.

User roles

Extend user roles and introduce tools.

Finance 360

Finalize Netting and SOA functionalities.

AI insights

Automate to improve process efficiency when managing resources and getting actionable data.
