

Cloudnet.ai is a cloud-native telecom solutions provider helping operators and enterprises launch faster, operate smarter, and scale with confidence. Together with our partners at **CloudRAN.AI**, we deliver end-to-end capability across **AI-native BSS**, **Private 5G**, and **RAN**—from design and deployment to integration and operations.

## What We Do

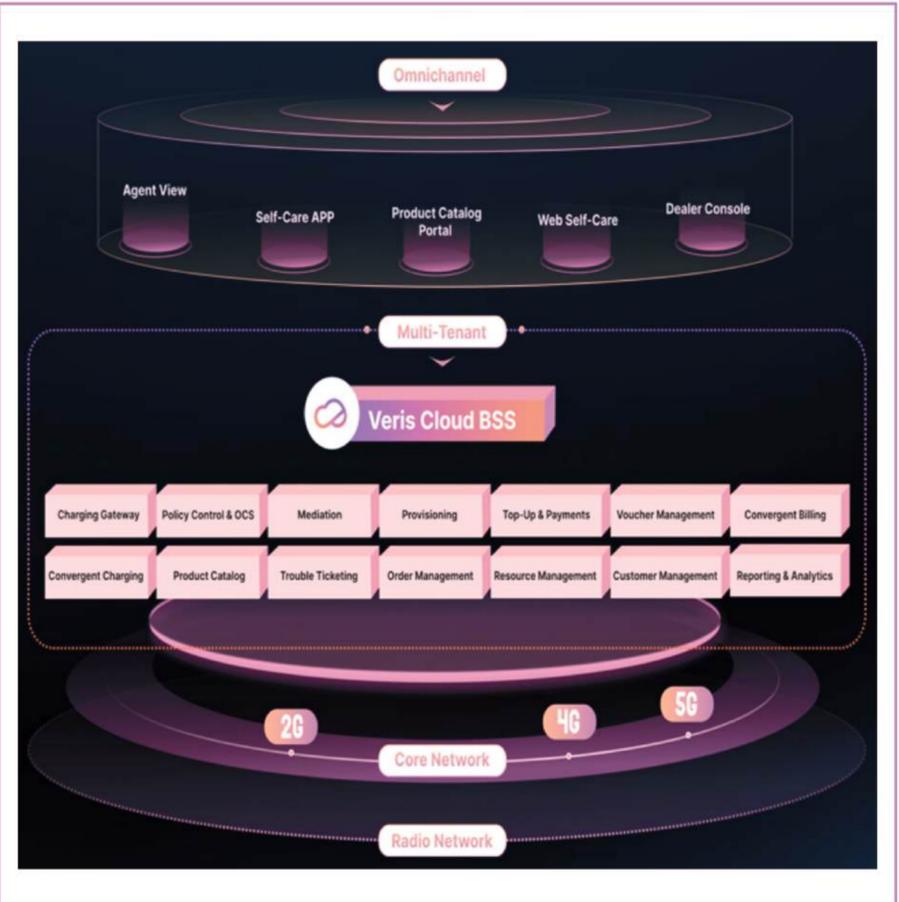

### Agentic BSS & Operations

Product catalog & offer lifecycle • Omnichannel experiences • Charging/Billing foundations • APIs & integrations

### Private 5G & RAN Solutions

Deployment-ready Private 5G • Open RAN / AI-RAN initiatives • Field-proven hardware & rollout support

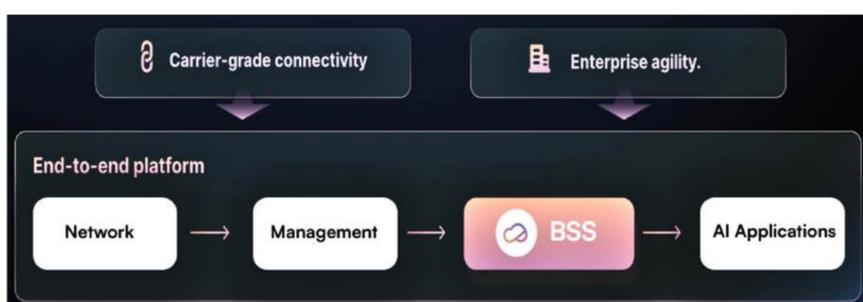

## Our Platforms

### Veris Suite — Carrier-Grade Agentic BSS

The backbone for product catalog, CRM, order management, charging/billing, and assurance—built to integrate via APIs and event hooks. Also includes Veris Agenti Builder - a low-code way to package capabilities into **Actions** → **Skills** → **Agents**, enabling repeatable agent workflows across BSS modules and channels.

### CloudRAN.AI — Private 5G Stack

Private 5G design / deployment / operations, with partner ecosystem alignment and a global deployment footprint.

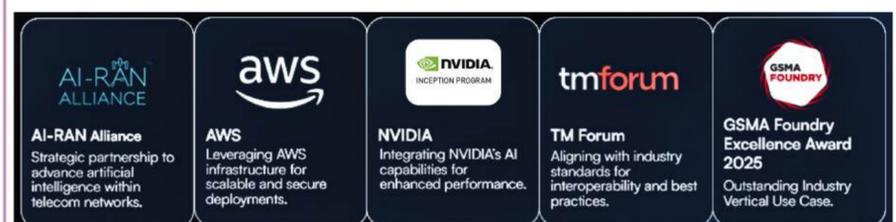

## Designed For

## Why Cloudnet.ai

- **Global delivery footprint** across Europe, Asia-Pacific, Africa and Latin America
- **Partner-led scale** with reseller / distributor / SI ecosystem
- **Field-proven outcomes** across operators, enterprises and institutions
- **Built for integration** with standard APIs associated with **TM Forum Open APIs / ODA** and cloud-native architecture

## Capabilities & Solutions

### 1. Digital Transformation — Reinvent the customer experience every day

We modernize customer journeys end-to-end—onboarding, care, changes, retention—across every channel (agent, app/portal, partner, field). With orchestration and AI-assisted operations, teams reduce manual triage and system switching, launching new journeys and offers faster while lowering operational load and improving experience consistency.

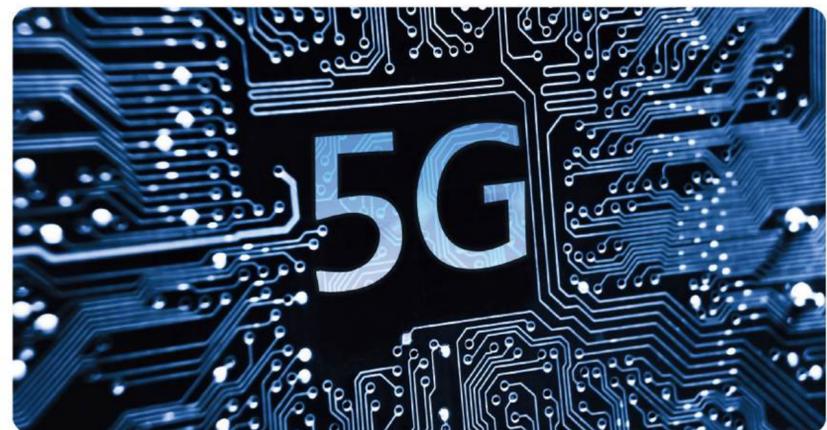

### 3. Digital Brand — Launch a new digital brand in weeks

We deliver a digital brand starter kit: core journeys, operational workflows, and experience templates across self-care, agent care, and sales support. With catalog and CPQ discipline, you can iterate offers quickly without breaking operations—improving product velocity, reducing friction in key journeys, and lowering cost-to-serve through guided resolution and self-service.

### 2. Turnkey CSP / MVNO Launch — Stand up a new operator in weeks

We provide a repeatable launch foundation—catalog, ordering, billing, and care—plus a practical integration plan and rollout sequencing. Ideal for greenfield operators, MVNOs, and new market entries, this approach compresses time-to-launch from months to weeks and reduces risk through standard interfaces and proven playbooks.

### 4. Private 5G — Monetize enterprise 5G with deployable solutions

We design, deploy, and operate Private 5G for real industry use cases—from manufacturing and campuses to logistics and public sector—integrated with OSS/BSS workflows for provisioning and assurance. The result is faster enterprise deployments, stronger service visibility, and a clearer line from network capability to product packaging and revenue, supported by partner-ready demos aligned with the AI-RAN ecosystem.
