A tool for a better life.

The Light Phone III is a decision you make when you're ready to say enough is enough.

Since we started making phones in 2014, our mission has been to give people back their most precious commodity – attention. Each Light Phone has been an inversion of the tech status quo: They are defined by the things they don't have, not the features they do. No internet, no social media, no news, no email, no any click bait-y infinity whatsoever.

The Light Phone III brings significant improvements to performance and overall usability without adding needless distractions, making it even easier to go light. It is designed to give you the tools to flourish as the most thoughtful & intentional version of yourself.

It is still a simple, refined and anti-dopamine hijacking technological convenience that you can trust. We are not anti-technology; we are insistent however that it should serve us as people. LightOS will continue rolling out new, intentionally designed tools year after year, as we have since the Light Phone II launched in 2019. Here's some of what's new for the Light Phone III:

- Larger matte OLED display** which retains the calm simplicity of the black & white interface.
- A camera, but... in our own way**, with a dedicated two-step shutter button.
- A replaceable battery cover and speaker grill** made from Sony SORPLAS recycled plastic.
- One global model** that works well around the world.
- A metal frame, USB-C, fingerprint ID, a flashlight, 5G, and an NFC chip** – giving us the potential to support a digital wallet and video calls with a front facing camera.
- Available tools now include:** Alarm, Calculator, Calendar, Directory, Directions, Hotspot, Music, Notes/Voice Memo, Podcast or Timer.

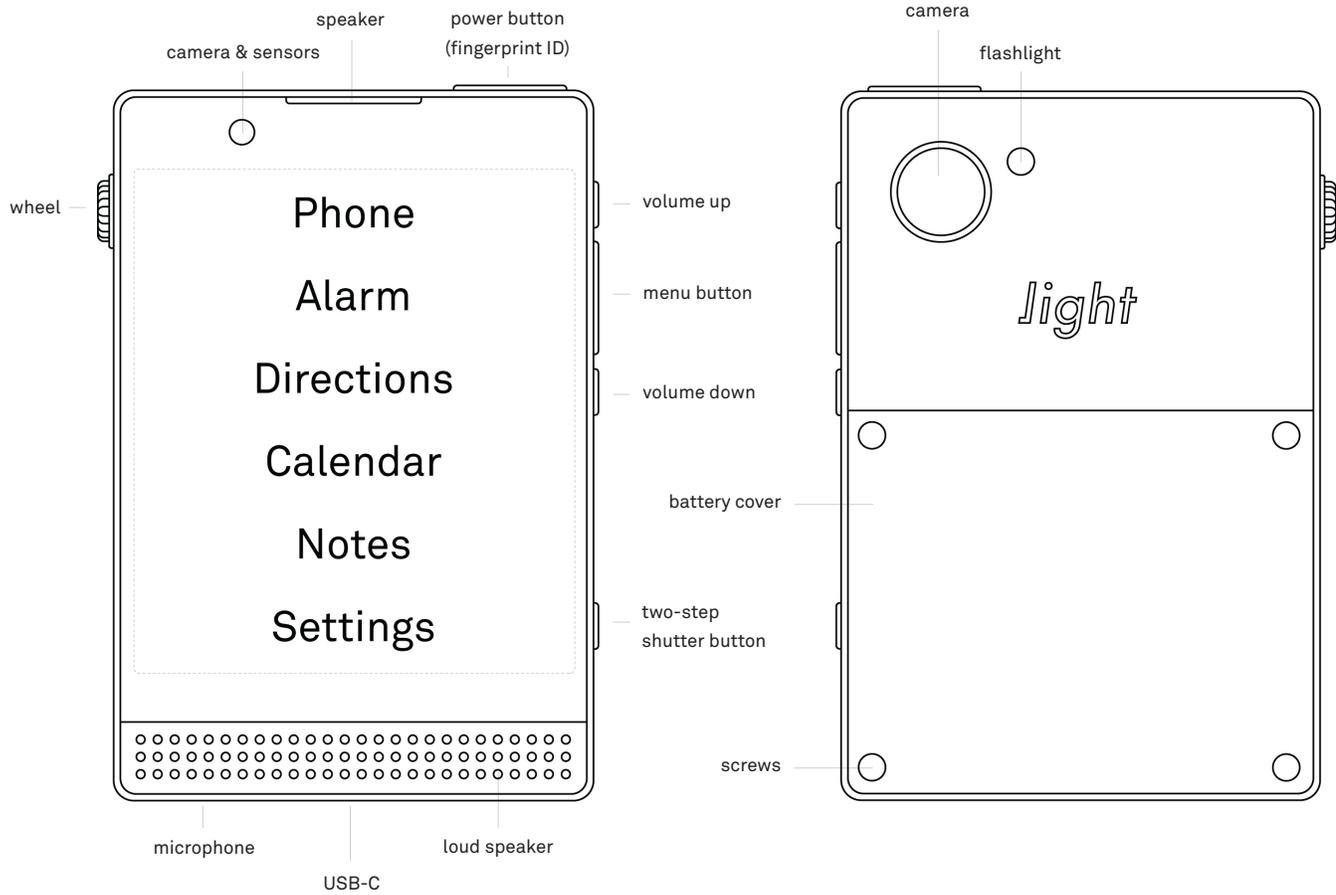

Culturally we are reaching a tipping point. The books, films, and conversations around the mental health side effects of smartphones, among many other issues, are everywhere. Light has partnered with [Buxton School](#) to go smartphone free, and Stanford University is [conducting a study](#) about switching to a Light Phone. We made a limited edition Light Phone II for Kendrick Lamar and Dave Free's [pgLang](#) (maybe you saw it in the "[Not Like Us](#)" video?). Incumbent industry giants are recognizing the demand their customers have for a phone that offers something different. For the first time, the Light Phone III will be available in select [Boost Mobile](#) stores in NYC starting in May. We will also be launching our Light Service Plan with Telus for Canadian customers, available exclusively through our website, and we are working with AT&T to offer Light Phone II on [AT&T New Tech](#). We partnered with Foxconn to develop and produce the Light Phone III so you can expect world-class build quality.

Whether you are daydreaming about a digital detox, reducing your anxiety, paying more attention to your toddler, increasing your productivity or are simply buying your very first phone, the Light Phone III is a tool for a better life. Our community is proof it's possible. And now it's even easier.

On March 27th we will begin shipping the Light Phone III to our earliest pre-orders, continuing to fulfill outstanding orders through April and May. A new pre-order is currently expected to ship in June and is available for \$599 from our website - [www.thelightphone.com](http://www.thelightphone.com).

Much love,  
Light

# Light III
